

VerbaPix App Summary

What It Is

VerbaPix is a language learning card game that mixes pixel-art cards with sentence-building gameplay to practice grammar. Players collect cards and assemble valid sentences.

Who It's For

Language learners who want to improve grammar and vocabulary through a game-like experience.

What It Does

- Drag-and-drop word cards to build sentences with grammar validation.
- Multiple game modes: Standard, 5/4 Split, and Co-op.
- Multiplayer lobby, room creation/joining, and quick-match flow.
- Progression tracking with XP, levels, missions, and achievements.
- In-game shop for cosmetics/items with purchase/equip flow (mock or API).
- Tutorials and overlays that explain the rules and gameplay.

How It Works

- Vue 3 SPA bootstraps in src/main.js with Router, Vuex, i18n, touch events, and a service worker.
- Routes map to views in src/views, which compose components from src/components.
- Game logic lives in src/core and src/utis (grammar, scoring, XP, time rules).
- Vuex modules (player, playing, progression, multiplayer) hold shared state for the UI.
- Services in src/services call REST APIs (auth, shop, matchmaking, vault) and realtime via Echo/Pusher.
- Backend/data store implementation details: Not found in repo.

How To Run

- npm install
- npm run dev
- Required env vars for API/realtime (VITE_BASE_URL, VITE_API_BASE_URL, VITE_REVERB_*):
Not found in repo.
